

Instinct NXTGEN™

Optinyte™ technology

NITROGEN STABILIZER

Best management practices for handling and mixing

Instinct NXTGEN™ nitrogen stabilizer uses a unique micro-encapsulation technology to create a water based, non-corrosive formulation with surface stability.

Here are a few tips to insure Instinct NXTGEN handles at its best.

Mix Instinct NXTGEN prior to use season

This provides a consistent viscosity and improves pumping and metering

Mixing with UAN

- Be sure to add all components independently of each other
- If using Verdict/Integrity it must be added only after 90% of total UAN is in the tank, all other products including Instinct have been mixed into solution and use no less than 15 total gallons of UAN
- Greater than 25% Ammonium Thiosulfate (ATS) and UAN blends will require constant agitation
- For UAN and Instinct NXTGEN mixtures, re-agitate if left standing for more than six hours

Recommended order of addition liquid fertilizer carrier

1. Tank half-full with liquid fertilizer (28%, 32% N) to start
2. Begin agitation
3. Pre-slurry Water-Soluble Packets (WSP)
(With UAN: pre-slurry WSP in water prior to addition to tank)
4. Wettable Powders/Dry Flowables
(With UAN: pre-slurry Wettable Powders/Dry Flowables in water prior to addition to tank)
5. Compatibility agent (if needed)
6. Instinct NXTGEN nitrogen stabilizer
7. Soluble Concentrate (SC) or Liquid Flowables
(liquid atrazine; use a compatibility agent if needed, prior to the addition of liquid atrazine)
8. Capsule Suspension (CS) or Suspension Emulsion (SE)
(FullTime® NXT, Keystone® NXT, Resicore® or SureStart® II herbicides)
9. Emulsifiable Concentrate (EC)
10. Soluble Liquids (SL)
11. COC, NIS, MSO, other adjuvants
12. Ammonium Thisulfate (ATS)
13. Top off with liquid fertilizer

-
- Mix and apply the same day
 - Use continuous agitation; Spray out the entire amount of spray mix
 - Rinse/drain sprayer including hoses, in-line screens and nozzles after equipment shut downs
 - Avoid leaving spray mixes in the application equipment overnight
 - Use 50 mesh or coarser screens on the in-line filter

FullTime NXT and Keystone NXT are federally Restricted Use Pesticides.

This reference guide is not intended as a substitute for the product label for the product(s) referenced herein. Product labels for the above product(s) contain important precautions, directions for use, and product warranty and liability limitations, which must be read before using the product(s). Applicators must be in possession of the product label(s) at the time of application. Always read and follow all label direction and precautions for use when using any pesticide alone or in tank-mix combinations.

Not all products are registered for sale or use in all states. Contact your state pesticide regulatory agency to determine if a product is registered for sale or use in your state. FullTime NXT, Keystone NXT, Resicore and SureStart II are not available for sale, distribution or use in Nassau and Suffolk counties in the state of New York. Always read and follow all label directions and precautions for use.
