

Hemi™ SC

Jemvelva™ active

INSECTICIDE

Early Season Thrip Suppression in Cotton

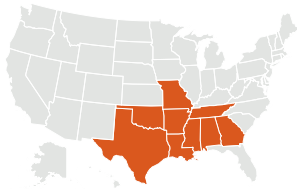

Cotton Application

Pest	Recommended Rate
Thrips (suppression)*	1.5 - 3 fl oz/A

States: AL, AR, GA, LA, MS, MO, OK, TN and TX

*Supported by a Section 2(ee)

Hemi™ SC insecticide with Jemvelva™ active, helps protect your cotton against costly losses, while minimizing the impact on beneficial insects. It provides a unique mode of action in insecticide rotations because the active ingredient, Jemvelva active, is the only IRAC Group 5 insecticide.

- Provides strong suppression of thrips in cotton
- Offers a new novel chemistry in cotton thrips control to rotate away from technologies facing resistance issues
- Where other options may increase crop response when mixed with early season herbicide applications, Hemi SC provides the tank-mix flexibility to not exhibit unacceptable response

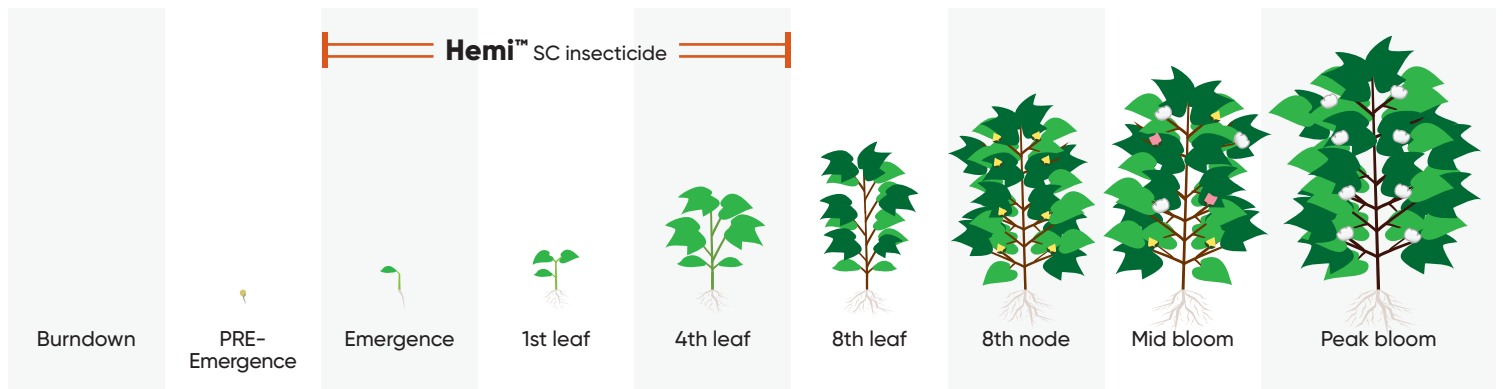

Best Management Practices

- Sufficient coverage of the spray area may result in higher efficacy
- Use appropriate nozzles; ultra coarse nozzles should not be used
- Use water volume of 12 GPA or more
- The use of an adjuvant may increase the level of thrips efficacy

Thrips in Cotton

Hemi SC provides a new option for early season suppression of thrips in cotton. For heavier infestations, use a higher rate in the labeled range. Using Hemi SC is not a replacement for insecticide seed treatments at planting. Early season, foliar applications of Hemi SC to suppress thrips in cotton should only be made to fields that have already received an insecticide seed treatment. Apply to small cotton (approximately 1-4 leaf). Use of an adjuvant may increase the level of thrips efficacy. Emulsified crop oils or methylated crop oil plus organosilicone combination products are recommended.
