

INSTINCT® HL: THE SUCCESS SPEAKS FOR ITSELF

By now you have probably heard that Instinct® HL nitrogen stabilizer is an improved formulation that maximizes nitrogen. With 1/3 less use rate per acre and improved odor control, Instinct HL simplifies blending. You have probably also heard that it extends nitrogen availability by up to eight weeks during crucial growth stages so your yields improve at harvest time. You may even have heard that Instinct HL works well with liquid manure, UAN, and urea. But have you also heard of these other benefits that applicators, retailers, and farmers are talking about?

Here's what your peers are noticing after using Instinct® HL

- More even and consistent spread pattern
- Minimal residue and buildup
- Decreased need to stop to clean off equipment
- Significantly improves urea impregnation process
- Less time mixing and blending
- Increased equipment efficiencies
- Reduced storage space

Air Flow - 55 acres applied, some buildup but not enough to change the spray pattern significantly

What your friends are saying

"I had to smell the mix to know Instinct was in there [the mix]. It was so dry I couldn't tell."

– Dan S., Applicator previously distraught with Instinct® II

"Instinct II would load onto the spinner and fall down the pile in sheets. With Instinct HL, you can't tell anything extra is on the urea."

– Eric B., Applicator and retailer

Spinner (RoGator) - 60 acres applied, some buildup

"Did someone forget to add the Instinct HL to the load? The fertilizer spread like it does without the Instinct."

– Minnesota Retail applicator

"The material seems to flow much better than the regular Instinct. It also didn't smell as strong as the other stuff."

– Maple River Grain, North Dakota

"We didn't have to stop once for a plugged up hose."

– North Dakota Coop Manager

"Not only did Instinct HL shorten my customers' impregnation process by nearly 30 minutes per semi-load, [it also] provided a safer way of impregnating their urea. They can now avoid moving equipment in the fertilizer shed and conveniently meter out their Instinct HL from their control room."

– Abby E., Sales representative
