

SureStart® II

HERBICIDE

Flexibility to spray corn from preplant to postemergence

Proven, broad-spectrum weed control

Provides dependable, broad-spectrum control of more than 60 difficult-to-control grasses and broadleaf weeds, including herbicide-resistance species.

- Proven to perform under heavy weed pressure
- Contains three modes of action to control weeds three ways
- Excellent activity against glyphosate-, triazine- and ALS-resistant weeds

Industry leading weed control maximizes yield and profit potential

According to university research, using a two-pass weed control program with SureStart® II herbicide followed by glyphosate can provide an average of 7 percent additional yield per acre when compared with glyphosate alone.

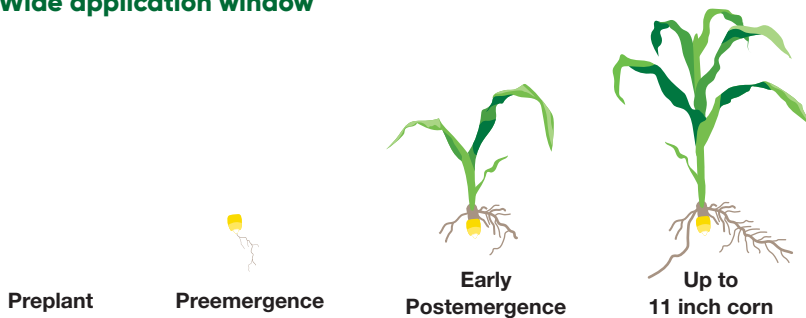

- Controls early season weeds that compete with corn for sun, water and nutrients
- Up to six weeks of residual control maximizes post glyphosate spray window
- Improves effectiveness of post spray application made on smaller, easier-to-control weeds

Application flexibility adds value

Weather, equipment and scheduling can cause timely delays. SureStart II can be applied from preplant through early postemergence, providing growers with the flexibility to overcome the unexpected.

- Tank-mix-compatible with glyphosate, atrazine, 2,4-D and other commonly used herbicides (refer to label for complete list)
- Doesn't contain atrazine, so it's ideal for use in atrazine-restricted areas
- Can be used in either one- or two-pass weed control program

Wide application window

Supporting corn growers every step of the way.

SureStart II is just one example of the many weed control solutions we offer to help corn growers reach full yield potential. Corteva Agriscience offers an industry-leading portfolio of herbicides designed to eliminate early season weed competition, control herbicide-resistant weeds and maximize yield potential. All of our brands are supported by industry-leading technical support and field support.

*Weeds confirmed resistant to glyphosate by university Extension.

Use Rates** by Soil Texture and Organic Matter Content

Soil Texture	Rate per Acre (Pints)	
	Soil Organic Matter Content	
	Less than 3%	More than 3%
coarse	1.5 – 2.0 pt.	1.5 – 2.0 pt.
medium	1.5 – 2.5 pt.	1.75 – 3.0 pt.
fine	2.0 – 3.0 pt.	2.0 – 3.0 pt.

**Use rates in the higher end of the rate range for longer residual activity.
